Let $f(x)$ and $g(x)$ be continuous at $x = a$

The following function are continuous at $x = a$

1) $y = kf(x)$

2) $y = (f(x))^p$

3) $y = f(x) \pm g(x)$

4) $y = f(x) \cdot g(x)$

5) $y = \frac{f(x)}{g(x)}, \quad g(a) \neq 0$

③ $\sin x$ ✓
 $\cos x$ ✓

$\sin x + \cos x$

① $\sin x$
 $\sin^2 x$ ✓
 $2 \sin x$ ✓

② x ✓, $\sin x$ ✓

$x + \sin x$ ✓

If, at $x = a$

 $f(x)$ continuous

$g(x)$ discontinuous

$$f(x) \pm \mathbf{g}(x)$$

discontinuous .x. .x.

ex

$\sin x + \tan x$

cd $n = \frac{\pi}{2}$

$f(x)$ discontinuous

$g(x)$ discontinuous

$$f(x) \pm \mathbf{g}(x)$$

$$f(x). \mathbf{g}(x),$$

may or may not be continuous

Differentiability : L.H.D & R.H.D

You are screen sharing LIVE Stop Share

Mouse Select Text Draw Stamp Spotlight Eraser Format Undo Redo Clear Save

Left hand derivative:

$$\text{L. H. D} = \lim_{h \rightarrow 0} \frac{f(a) - f(a-h)}{a - (a-h)}$$

$$f'(a^-) = \lim_{h \rightarrow 0} \frac{f(a-h) - f(a)}{-h}$$

Right Hand Derivative:

$$f'(a^+) = \text{R. H. D} = \lim_{h \rightarrow 0} \frac{f(a+h) - f(a)}{h}$$

If $L.H.D = R.H.D$ then $y = f(x)$ is differentiable at $x = a$

$$\frac{\Delta f}{\Delta x}$$

Rate of change

$\lim_{h \rightarrow 0} \frac{f(a+h) - f(a)}{h}$ does not exist

$\lim_{h \rightarrow 0} \frac{f(a+h) - f(a)}{h}$ is infinity

Differentiability

You are screen sharing LIVE Stop Share

Mouse Select Text Draw Stamp Spotlight Eraser Format Undo Redo Clear Save

$$f'(x) = \lim_{h \rightarrow 0} \frac{f(x+h) - f(x)}{h}$$

Where,
h is small positive quantity

If you know function is differentiable then use this formula

$\frac{\Delta y}{\Delta x}$

Ex: $y = x^2 \ln x$

$$y' = \lim_{h \rightarrow 0} \frac{(x+h)^2 \ln(x+h) - x^2 \ln x}{h}$$

Ex: $y = e^{\cos x}$

$$y' = \lim_{h \rightarrow 0} \frac{e^{\cos(x+h)} - e^{\cos x}}{h}$$

simplify & limit

Relation Between Continuity and Differentiability Type I

You are screen sharing LIVE Stop Share

Mouse Select Text Draw Stamp Spotlight Eraser Format Undo Redo Clear Save

1 If $f(x)$ is discontinuous at $x = a$ then $f(x)$ is non-differentiable at $x = a$

$$\text{Ex: } f(x) = x, x \leq 0 \\ = x + 1, x > 0$$

at $x = \frac{\pi}{2}$

$\tan x$ discont
→ Not differentiable

Vertical tangent

A tangent line that is vertical, meaning it has infinite slope and function whose graph has a vertical tangent is not differentiable at the point of tangency.

Talking: Vivek Varshney

In this case $|f'(x)| \rightarrow \infty$ at $x = c$

Vertical tangent on the function $f(x)$ at $x=c$

Differentiability

Check following condition

Talking:

1 Differentiable on open interval (a, b)

2 Differentiable at $x = b$ (L. H. D)

3 Differentiable at $x = a$ (R. H. D)

$\frac{dy}{dx}$
rate of change
slope of tangent

Check all the conditions for differentiability over a closed interval
