PASSAGE – 3

There are three main groups of oils - animal, vegetable and mineral. Great quantities of animal oil come from whales, those **enormous creatures** of the sea, which are the largest of the animals remaining in the world. To protect the whales from the cold of the Arctic seas, nature has provided them with a thick covering of fat, called blubber. When the whale is killed, the blubber is **stripped off** and boiled down. It produces a great quantity of oil which can be made into food for human **consumption**. A few other creatures **yield** oil, but none so much as the whale. The livers of the cod and halibut, two kinds of fish, yield nourishing oil. Both cod liver oil and halibut oil are given to sick children and other **invalids** who need certain vitamins. Vegetable oil has been known from very old times. No household can get on without it, for it is used in cooking. Perfumes may be made from the oils of certain flowers. Soaps are made from vegetable and animal products and the oils of certain flowers.
